The Congress and Meeting Presentation Network

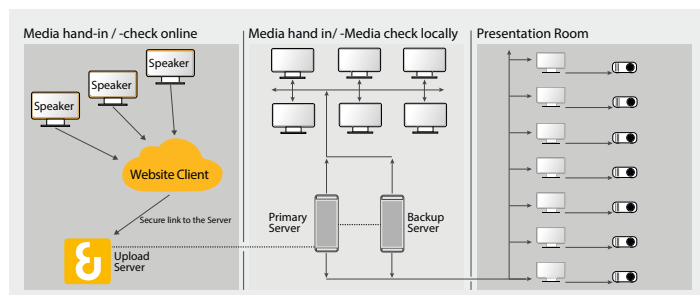

come2present – Server-based presentation management

■ The electronic media used nowadays by speakers at conferences and congresses are constantly presenting organisers with new challenges. When giving a presentation, we are faced with a growing choice of methods, a confusing array of formats and ever-expanding file sizes for film clips. Different sessions call for their own tailor-made technology; made-to-measure solutions need to be found for presentations held in rapid succession or in parallel as well as for changes introduced at short notice that could have a negative impact on the overall proceedings.

■ With come2present – the central tool for efficient presentation management – all presentations are structured and stored in a database either online or via a local media depository before the event. Speakers can easily review and update the current status of their presentations thanks to the clear structure. Those in charge of the itinerary are provided with up-to-date overviews of the status and schedule as well as with useful statistics – all in real time.

■ Supervision of media technology and presentation management from a single source creates significant synergy effects for congress organisers and conference centres – thanks to the minimisation of interfaces, central contact persons and lower overall staff requirements.

come2present – Focus on reliability

■ With a view to ensuring network stability, N&M has developed a process to control the communication between the database on the servers and the playing devices in the presentation rooms. No matter whether customers order the installation of high performance network technology or decide to use the existing infrastructure at the venue: come2present keeps the volume of data in the network to a minimum. Various redundancy levels are available to meet individual requirements in terms of reliability.

■ Enormous flexibility and innovative extension tools. We are well aware that an ideally structured and, above all, reliable instrument still needs to be able to offer customers a high degree of flexibility. come2present can quickly deal with modifications in presentations and changes in the room plan at any time – without affecting the live proceedings. To accommodate large audiences, the system simply adds extra rooms and provides them with simultaneous transmission of the presentations.

■ Further tools – for example a system for limiting speaking time, recordings for webcasts or for documentation – are already implemented as an interface and can be chosen as additional modules to suit individual requirements. All user interfaces are designed to comply with the client's CI stipulations. come2present also offers a further additional function for controlling room signage systems.

■ N&M doesn't only work with come2present in congress buildings; this scalable system makes an ideal addition to any location. The company's presentation management system ensures smooth running and dependability at large congresses with numerous speakers and a complex room structure – vital aspects whose importance shouldn't be underestimated at smaller conferences that demand high standards.
